Step up your business's data backup and recovery strategy

Net3 Technology Backup and Disaster Recovery Services

What would be the cost to your business if you lost your critical data? Your business data is the lifeblood of your company and the amount you are collecting and storing is growing all the time. Imagine the impact if you lost a day's data, a week's data, or a year's data due to inadequate or infrequent backup processes? What would happen, and could you recover?

Safeguarding your business and its data is important now more than ever

In today's on-demand business environment, data protection is critical. That's because modern businesses leverage data to be forward-thinking – agile, constantly improving and innovating, But threats and risks have become an increasing part of operating today. These risks, such as malware, ransomware or even user error and hardware failures can bring progress to a halt – leading to devastating downtime costs that can put your company out of business. The key to moving your business forward with resilience is a better solution to backup and recovery.

But there is growing complexity, cost and risk

Designing, managing and administering in-house backup and data recovery solutions has become a challenge for even the most proficient IT experts. New business demands, the multitude of content sources, and different data formats add to the growing complexity of backup and recovery for businesses that are already difficult to manage. Most companies significantly underestimate how long it will take to get back online after an unplanned outage. In fact, businesses do not typically invest the necessary time and resources in disaster recovery planning to ensure smooth recovery from data backups.

Backup and recovery managed service: You just focus on your business

We keep your business protected from everything – from human error, hardware failure and more – and have you up and restored in minutes. We work closely with our clients to leverage the best high-availability solution that meets the needs of your business, creates a perfectly tailored backup strategy, and plans to protect your business-critical data. You just focus on what you do best: your business.

Top 3 Major Costs of Downtime

1 Revenue and sales

The average cost of downtime is at least $100,000 per hour across all industries and organizational sizes.

2 Competition and business opportunities

Today's modern digital transformation and cloud initiatives rely on data availability.

3 Customer loyalty and brand

Consumers and partners need to trust the online platforms and services they use. Your business will struggle to maintain that trust if your data is compromised.

DATA SHEET

What are Backup and Disaster Recovery Services?

They are services that protect your data in real time and save your business from downtime and loss. We utilize leading technology and processes via a cloud-based solution to safeguard your data.

- Storing and protecting your backup data
- Monitoring and managing your backups
- Enabling a rapid and effective recovery

More than backup: A team of experts and a service you can trust.

We work closely with our clients to deliver the best data protection solution to meet your business's needs. We consider things like what data is most critical to your business operations, the industry you work in, and the different levels of access needed for your account.
