CASE STUDY

SPS New England Chooses Net3 Technology for Disaster Recovery as a Service (DRaaS)

ABOUT SPS NEW ENGLAND

SPS New England is one of the leading bridge, highway, transit/railroad and marine contractors in New England, Massachusetts. The SPS team has earned an outstanding reputation for safely completing the most challenging projects for the state DOTs, cities, towns and private clients.

CHALLENGE

When Net3 started discussions with SPS New England, they were using a traditional backup and their only "DR Plan" was the NAS located directly across the street. They were all new to the business and after running through tabletop exercises, they realized they did not have DR capability.

SOLUTION

Knowing SPS New Englands environment, budget and goals, Net3 ensured that Zerto would offer the DR service, low RPO's and low RTO's that they were seeking. By setting Zerto up for both DR and backups, they were given the best of both worlds.

SPS New England was given peace of mind by having their data in the cloud with the ability to recover anywhere with connection and an office space. The local storage allows them to recover an individual application that is on a server with multiple applications, which was key for them.

In addition to their DR solution, SPS New England received Net3's assistance in creating a thorough Net3 DR Runbook. They now have confidence that their DR plan can be executed by anyone on their team, regardless of technical ability - with Net3 there to assist.

ABOUT NET3 TECHNOLOGY

Net3 Technology is a leading Cloud Services Provider that offers Cloud Backup, Disaster Recovery, Cloud Production, Network Security, and Ransomware Protection paired with excellent customer support - ensuring cloud confidence for IT teams nationwide. Contact us today to learn more!
